Strengthening Belgium–UK research collaboration in Artificial Intelligence

Following the [TRAIL - TRusted AI Labs](#) Summer School held in London in 2025, it was a pleasure to co-organise this European AI Proposal Writing Workshop, bringing together researchers from Belgium and the UK to build ambitious Horizon Europe proposals.

Hosted by H.E. Ambassador [Jeroen Cooreman](#) at the Belgian Residence in London, the workshop reflected the shared commitment of Belgium and the United Kingdom to strengthening scientific collaboration in Artificial Intelligence and fostering ambitious Horizon Europe partnerships.

Throughout the day, participants worked together to identify common research priorities, define the foundations of future consortia and develop concrete project ideas around AI for the future of work, sustainable data processing and AI for healthcare.

For several years now, through [Wallonie-Bruxelles International - Research and Innovation](#), I have had the privilege of supporting TRAIL in its international ambitions. It is always inspiring to work alongside such a remarkable community of talented Belgian researchers. A special thank you to Prof. [Benoit Macq](#) and [Luca La Fisca](#) for their commitment and excellent collaboration in making this workshop possible.
